

The Nile

The river Nile was essential to life in ancient Egypt. Every year, it flooded, leaving behind a black **silt** that enriched the soil for growing crops. The river was also used to **irrigate** fields in other areas.

Most people lived along and around the Nile. This is still true in Egypt today. The river was used for water, fishing and trade. Mud from the river was used for bricks and papyrus plants were used to make paper.

Embalming and Mummification

1. Wash the body.
2. Pull out the brain through the nostrils with a hook and fill the skull with sawdust.
3. Remove all internal organs except the heart. Put them into canopic jars.
4. Cover the body in natron salt and leave it to dry for 40 days.
5. Remove the natron salt and pack the body with straw, dried grass or linen.
6. Apply makeup and fake eyes.
7. Wrap the body in linen fabric, adding amulets and a Book of the Dead.
8. Place the mummy in a sarcophagus (decorated coffin).

Timeline

Writing

Hieroglyphs were written by scribes, who had to go to a special school to learn how to write. Almost all scribes were men, although there is some evidence of female doctors being able to read hieroglyphs in medical texts. Hieroglyphs were used for religious texts and inscriptions on statues and tombs. They were also used for counting crops and animals so that the right taxes could be taken.

The Rosetta Stone, discovered in 1799, was written in hieroglyphs and two other languages, including ancient Greek, which linguists (language experts) could still read.

Linguists translated the hieroglyphs by comparing the languages. It took 20 years to translate all the text into modern language.
